-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 July 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 – 5, 8 – 11, 14 – 17, 20, 21, 24 – 27, 30, and 31 are rejected under 35 U.S.C. 102(e) as being anticipated by Cao et al. (U.S. Pat. No. 6,721,269) (Apparatus and Method for Internet Protocol Flow Ring Protection Switching).

2.1 Regarding claim 1, Cao discloses a method of protecting an Open Shortest Path First (OSPF) network against network failures affecting traffic flow between an interior router (IR) and a predetermined primary area border router (ABR) using a back-up link between the IR and a predetermined alternate ABR, the method comprising steps of:

maintaining the back-up link in a dormant state during normal operations of the network, such that no traffic is forwarded to the back-up link during normal operations of the network (col. 9, lines 6 – 31 “The table of FIG. 2, a product of **OSPF** ...” “The IFINDEX field 310 indicates which egress link from the current router should be employed to reach the next hop router.” “The **status field 316** indicates whether the

Art Unit: 2141

associated link is up or down, that is, whether the **link is operating or not.** "The router type field 312 indicates whether the router is an **internal router**, an **area border router**, a backbone router, ..."; col. 4, lines 26 – 31 "When that path **fails**, the routers exchange information to establish an alternative path."); and

activating the back-up link in response to a network failure affecting communications between the IR and the primary ABR, such that traffic can be routed between the IR and the alternate ABR through the back-up link (col. 9, lines 6 – 31; col. 4, lines 26 – 31).

2.2 Per claim 2, Cao teaches a method as claimed in claim 1, wherein the step of maintaining the back-up link in a dormant state comprises steps of:

assigning a backup interface type attribute to the back-up link (Fig. 2, item 310; "col. 9, lines 21 – 22 "IFINDEX field 310"); and

controlling each of the IR and the alternate ABR such that:

information respecting the back-up link is not advertised to adjacent routers (col. 9, lines 6 - 31); and

the back-up link is not identified as a valid route in respective forwarding tables of each of the IR and the alternate ABR (col. 9, lines 29 – 31 "status field 316 indicates whether the associated link is up or down.").

2.3 Regarding claim 3, Cao discloses a method as claimed in claim 1, wherein the step of activating the back-up link comprises steps of:

Art Unit: 2141

detecting the network failure affecting communications between the IR and the primary ABR (col. 2, lines 19 – 24 “new routers may employ ... maintenance information ... to detect such path failures.”; col. 4, lines 26 - 35);

promoting the back-up link to an active status (col. 2, lines 19 – 24; col. 4, lines 26 - 35); and

advertising the back-up link as a valid route (Fig. 2, item 316; col. 9, lines 29 - 31).

2.4 Per claims 4 – 5 and 8 - 11, the rejection of claims 1 – 3 under 35 USC 102(e) (paragraphs 2.1 – 2.3 above) applies fully.

2.5 Regarding claims 14 - 17, 20, 21, 24 – 27, 30, and 31, the rejection of claims 1 – 5 and 8 – 11 under 35 USC 102(e) (paragraphs 2.1 – 2.4 above) applies fully.

Response to Arguments

3. Applicant's arguments with respect to claims 1 – 5, 8 - 11, 14 - 17, 20, 21, 24 – 27, 30, and 31 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

4. Claims 6, 7, 12, 13, 18, 19, 22, 23, 28, 29, 32, and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in

Art Unit: 2141

independent form including all of the limitations of the base claim and any intervening claims.
